

Strain Self-Sensing Polymer Nano-Composites

Filesize: 2.63 MB

Reviews

This publication is definitely not simple to begin on studying but really exciting to read. It is actually rally fascinating throug reading time. Your life span will be enhance when you complete looking at this publication.

(Laurence Littell)

STRAIN SELF-SENSING POLYMER NANO-COMPOSITES

LAP Lambert Acad. Publ. Jul 2011, 2011. Taschenbuch. Book Condition: Neu. 222x151x12 mm. This item is printed on demand - Print on Demand Neuware - The present work aims for making a proper composite which can be used to monitor its own condition. These materials are called self-sensing composites. In order to achieve this target carbon nanotube (CNT) composites, due to their extraordinary electromechanical properties, are most desired. CNT composite self-sensors are going to be replaced by fibre optic sensors, suffer from high cost, low durability, small sensing volume and mechanical property loss. The most important application of self-sensors is in civil engineering, but this work tries to design a system able to self-sensing of damage because of the practical importance of structural health monitoring, which is needed for aircraft hazard. Referring to Literature indicates that there are two important concepts (Tunnelling effect and Bandgap structure), which explain for the conducting behaviour of CNT semi-conductors. As changing the bandgap structure of CNTs by a simple deformation of composite is pproximately impossible, tunnelling effect has the most influence on the electrical response of a composite as a function of deformation. 76 pp. Englisch.
